

Steps:

1. Download the required libraries for your virtual environment by entering the following commands into your terminal:
`pip install torch torchvision`
`pip install pillow`
`pip install matplotlib`
`pip install opencv-python`
`pip install numpy`
`pip install flask`
`pip install flask-cors`
2. Run the FlaskApp.py file and wait for the local host to initialize
3. Open the website and upload an image. The AI will then classify the type of waste in the image
